## Curve Fitting: Modeling with Quadratic Functions

Goal 1: Write quadratic functions given characteristics of their graphs.
Goal 2: Use technology to find quadratic models for data.
Prior Knowledge: Solving a system of equations using Elimination or Substitution, or with Inverse Matrices methods.

## Warm-up:

Solve the system of equations using Elimination or Substitution. $\left\{\begin{array}{l}2 x-y+z=2 \\ x+y+z=3 \\ -3 x-2 y+z=-4\end{array}\right.$

Example 1 Writing a Quadratic Function in Vertex Form Write a quadratic function for the parabola shown below.

$$
y=a(x-h)^{2}+k
$$

Example 2 Writing a Quadratic Function in Intercept Form
Write a quadratic function for the parabola shown at the right.

$$
y=a(x-p)(x-q)
$$

## Example 3 Writing a Quadratic Function in Standard Form

Write a quadratic function that fits the points $(0,5),(2,1)$, and $(3,2)$.

| $(x, y)$ | $a x^{2}+b x+c=y$ | System of Equations |
| :---: | :---: | :---: |
| $(0,5)$ |  |  |
| $(2,1)$ |  |  |
| $(3,2)$ |  |  |

Solve the system using Elimination or Substitution methods.

## Example 4 Writing a Quadratic Function in Standard Form

Write a quadratic function that fits the points $(-2,-5),(1,1)$, and $(3,-15)$.

| $(x, y)$ | $a x^{2}+b x+c=y$ | System of Equations |
| :---: | :---: | :---: |
| $(-2,-5)$ |  |  |
| $(1,1)$ |  |  |
| $(3,-15)$ |  |  |

Solve the system using Elimination or Substitution methods.

## Example 5 Finding a Quadratic Model for a Data Set

A study compared the speed $x$ (in miles per hour) and the average fuel economy $y$ (in miles per gallon) for cars. The results are shown in the table.
(Source: Transportation Energy Data Book)

| Speed, $x$ | 15 | 20 | 25 | 30 | 35 | 40 |
| :--- | :---: | :---: | :---: | :---: | :---: | :---: |
| Fuel Economy, $y$ | 22.3 | 25.5 | 27.5 | 29.0 | 28.8 | 30.0 |

| Speed, $x$ | 45 | 50 | 55 | 60 | 65 | 70 |
| :--- | :---: | :---: | :---: | :---: | :---: | :---: |
| Fuel Economy, $y$ | 29.9 | 30.2 | 30.4 | 28.8 | 27.4 | 25.3 |

a) Use a graphing calculator to find the best-fitting quadratic model for the data.
$1\left\{x_{1}, x_{2}, \ldots\right\} \rightarrow L_{1} ;\left\{y_{1}, y_{2}, \ldots\right\} \rightarrow L_{2}$ Enter the data into two lists on the graphing calculator.

## $2 \mathbf{2}^{\text {nd }} \mathbf{Y}=\rightarrow$ STATPLOT ON

Set-up the type of graph to display. Then hit ZOOM 9.

## 3 STAT $\rightarrow$ CALC $\rightarrow$ 5: QuadReg

Use the quadratic regression feature to find the best-fitting model for the data. Write the $a, b$, and $c$ values with three significant digits in the answer.
b) Find the speed that maximizes a car's fuel economy.

1 Use the $-\frac{b}{2 a}$ rule, and do it algebraically.
<OR>

2 Graph your equation in the $\mathbf{Y}=$ and go to $\mathbf{2}^{\text {nd }}$ TRACE $\rightarrow$ 4:maximum to use the MAXIMUM feature on the graphing calculator.
